                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NS-09-252-991A-24981

Sequence 24981, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARRUGINGAR FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ARRUGINGAR FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABRUGINGAR FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-28
NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 24981

LENGTH: 400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WESOUR 9

Sequence 1, Application US/08829110

Patent No. 5882890

GENERAL INFORMATION:

APPLICANT: Hillman, Jennifer L.

APPLICANT: Hillman, Jennifer L.

APPLICANT: Goll, Surya K.

TITLE OF INVENTION: NOVEL REGULATORS OF G-PROTEIN

TITLE OF INVENTION: SIGNALING

NUMBER OF SEQUENCES:

CORRESPONDENCE ADDRESS:

ADDRESSEE: Incyte Pharmaceuticals, Inc.
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS FILE REFERENCE: 107196.132
CURRENT PALLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1999-02-12
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR PLICATION NUMBER: US 60/096,409
PRIOR PLICATION NUMBER: US 60/096,409
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 26528
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mismatches

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

T. Lineage-specific selection in human mtDNA: lack of polymorphisms in a segment of MTNDS gene in haplogroup J.";

Mol. Biol. Evol. 20:2133-2142(2003).

-!- CATALYTIC ACTIVITY: NADH + ubiquinone = NAD(+) + ubiquinol.

-!- SIMILARITY: Belongs to the complex I subunit 1 family.

C -! - CAPALYIC ACTIVITY: NADH + ubiquinone = NAD(+) + ubiquinol.

C -! - CAPALYIC ACTIVITY: NADH + ubiquinone = NAD(+) + ubiquinol.

C -! - SIMILARITY: Balongs to the complex I subunit 1 family.

Sequence 26751, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN:
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/248,796A

CURRENT APPLICATION NUMBER: US 60/074,725

PRIOR PAPLICATION NUMBER: US 60/074,725

PRIOR PELING DATE: 1998-02-13

PRIOR FILING DATE: 1998-02-13

PRIOR PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

LENGTH: 60

LENGTH: 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 8270, Application US/09543681A

T11837

H+-transporting two-sector ATPase (EC 3.6.3.14) protein 8 - common gibbon mitochondrion (5/5pecies: mitochondrion Hylobates lar (common gibbon, white-handed gibbon)
C;Date: 16-Jul-1999 #sequence_revision 16-Jul-1999 #text_change 09-Jul-2004
C;Accession: T11837
R;Arnason, U; Gullberg, A; Xu, X.

Hereditas 124, 185-189, 1996
A;Title: A complete mitochondrial DNA molecule of the white-handed gibbon, Hylobates lar A;Reference number: Z17353
A;Accession: T11837
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Residues: 1-68 cARN
C;Genetics: A;Residues: MylPROT:Q95705; EMBL:X99256; PIDN:CAA67632.1
A;Experimental source: isolate Ester
C;Genetics: A;Genetics: A;Genetics: A;Genetics: Code: SGCI
C;Superfamily: H+-transporting ATP synthase protein 8
C;Keywords: ATP biosynthesis; hydrolase; membrane-associated complex; mitochondrion; oxi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tillio

H+-transporting two-sector ATPase (EC 3.6.3.14) protein 8 - baboon mitochondrion

G.Species mitochondrion Papio hamadryas (baboon)

C.Species mitochondrion Papio hamadryas (baboon)

C.Accession: Tillio

C.Accession: Tillio

Nucleic Acids Res. 26:967-973(1998).
-!- FUNCTION: This is one of the chains of the nonenzymatic component
- (CF(0) subunit) of the mitcohondrial Afrase complex.
-!- CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate +
                                                                                                                                                                                                                                                         [8]
